

ROULETTE SECRETS REVEALED

Start Here: Forward

It's time for you to see for yourself, how to make thousands of dollars each and every week, discover new KILLER moneymaking secrets and learn about breakthrough strategies which will dramatically and instantly increase the amount of money you make doing what you love...playing ROULETTE.

Now, you have a once in a lifetime opportunity to literally transform your life and fulfill your dream of being an all time winner, who earns a great living, a reality...after reading this book.

I'm sure you understand that no matter how great a course, a book, or a series of tapes are, there is absolutely nothing to replace the hands on learning experience of trying this strategy at a casino or test it out without putting any money on the line.

A book unlike any other is now being offered to the public. In just minutes I'm going to tell you how to beat the casino and what it's all about in detail. But first, I think it's important to tell you three things this book is NOT about.

1. There is no illegal moneymaking methods in this book.
2. There won't be the same old systems found in every other gambling book.
3. This is not just theory, but an actual step by step system.

When I write, it is in a no-nonsense, straightforward and highly enthusiastic manner. I am enthusiastic, but I don't have a Ph.D. in English (which I'm told means Piled Higher and Deeper!), so if it's literary style you're looking for, you might find my writing unusual or even annoying. But if it's a proven moneymaking roulette system you want and not stylish prose, then this is the book for you!

Read this book in its entirety, and then re-read it until the concepts are ingrained in your head. Do not skip any chapters as every chapter includes information which is vital to your winning success. Read it in the order it is laid out. Make sure you follow the system exactly. DO NOT DEVIATE from this time tested system. Some sections contain rules you must follow to the letter or you are guaranteed to lose.

Now let the journey begin...take a deep breath, and dive into the realm of excitement, intrigue and awe.

Chapter 1: Make Money With This System

Roulette is one of the most exciting games in gambling history, and that's what instantly attracted me to the game. I myself have played several other games in the casino like blackjack, baccarat, craps and stud poker but nothing gave me more excitement and adrenaline flow than roulette. This system, as I will explain to you in the later sections, is absolutely stunning. I did not even realize how powerful and effective it was.

I explained the game strategy to a friend of mine, and he was excited enough to go in on it with me as partners. We were so enthusiastic about this system that we decided to go head on; with one thousand dollars each. With two thousands dollars between us, walking into the casino that day I felt empowered and I was ready to make some big bucks.

We took careful consideration in choosing our roulette table and dealer. Once we were comfortable, we sat down at the minimum \$5 table. We started small and as we progressed, we moved to higher minimum tables. We bought \$400 worth of chips. Would you believe me if I told you that we didn't even touch the other \$1600 for the rest of our stay? Believe it! The system was working according to plan, the excitement I felt was astounding. The pit boss twice called in for more \$100 chips, because we had them all jiggling away in our pockets. Occasionally, we'd cash in our \$100 chips for a cool \$1000 chip.

We were winning constantly. I was so dumbfounded, as to the fact that I had just discovered a very successful system. We played my system for six straight hours and decided to break for a celebration. We went for dinner at one of the in-house restaurants in the casino. We ordered lobsters, and steaks and wine. We were enjoying ourselves to the fullest.

We now had every confidence in my system and now we decided to go for some big money. We started to play at the higher minimum tables, and this only increased our winnings. We finally ended up at the VIP tables where the minimum bet was \$25. At this point we were up about seven thousand dollars, yes that's right, \$7000! Soon after we hit the \$10,000 mark we decided to call it a night...\$5000 each was ENOUGH for an honest days work, notice my sarcasm.

But that night with \$10,000 between us we felt like we were on top of the world, not because we had won all that money, but because we found a way to beat the casino at its own game. And this was how it all started. Since then I have amended and tried out variations of my system to fine tune the strategy. All in all I have been winning a great amount of money and I'm sure you'll have your own experiences with this system. And now I will share all my knowledge with you. Why? Why not? I see so many people in distress because the casinos have sucked them dry. I've seen people who have lost their homes, lost their car, and their entire saving to the casinos. Not to mention losing their families and their own sanity.

So please pay extra attention to Chapter 8 as it guides you in the correct path and prevents you from losing your head.

This system can give the everyday gambler an "edge" that they never before had. Please read all the sections in its entirety and make sure you understand the system. Read through all the instructions and guidelines as they are crucial to your success.

Chapter 2: About the Author

I am a gambling professional who has been in the business for 12 years. You might remember that 13 years ago I was at the verge of bankruptcy. I was \$14,000 in personal debt, \$15,000 in business debt, my wife was pregnant and working two jobs. I was only averaging \$300 a week. It was a time of do or die; make my dream of becoming financially wealthy a reality or get a regular 9 to 5 job.

After I discovered this real moneymaking secret and adapted it to what is being used now, my life changed. I went from earning \$1200 a month to averaging \$11,000 a month, eliminated by debt in two months and increased my income by over 1000%.

Best of all, I have taught literally hundreds of people like yourself from around the world my system of making money. This formula can be applied by ANYONE who wants to make money playing roulette. I earn my living as a professional gambler using the method described here. As you've already guessed, the casinos are not in favor of me revealing my secrets. The secrets I reveal here are not in any way illegal or against gaming rules.

The information in this book did not come very easily. I have put in countless hours of hard work and sweat into these methods. I have fine tuned the system to maximize profits and minimize losses. I have lost thousands of dollars with other systems that made false promises. I was once a victim, just like yourself. It wasn't until I discovered this system that I actually started to take control of my life, and not the casino. I would like to help you make the most out of your hard earned money.

Chapter 3: The Six Commandments You Need To Follow

Please follow these rules to the letter. No excuses! Break these rules and you are on your own. This will either make or break you, so pay extra attention to this section.

1. Stick to the strategy. Don't deviate from the betting plan. I cannot stress this enough. Many players in the midst of winning, soon start to become greedy and daring. This will be the pitfall of your success. Do not make those "gut feeling" bets. Stick to the system exactly.
2. Take with you only what you can afford. Your bankroll should be a comfortable amount to you. However, I do strongly recommend a minimum bankroll you should bring with you to maximize your winnings. These recommended amounts are listed on the charts I've provided at the end of the book. These charts are for you to utilize when playing by my system. I will go into more detail in later chapters, so read on.
3. When you arrive at a table, buy in for a quarter of your bankroll. You don't want to reveal your entire bankroll to the dealer, because you never show your enemies your entire battle plan. Don't give them more information than you need to. Buying in only a quarter of your bankroll can avoid any irrational betting decisions like betting your entire bankroll on one number.
4. If by breaking one of these rules, you have depleted your funds (your whole bankroll that you brought that day) to zero, DO NOT withdraw any more money because you are still hurting from your loss, and you will be tempted to make irrational decisions when betting. Go home and come back another day after you have rested. This is one of the most important rules.
5. When do you stop? Well, before you step into the casino set a fixed amount that you want to walk out of the casino with. Make sure it's reasonable, like doubling your bankroll. Once you've reached your goal, you may

be asking yourself “Should I stop or should I keep playing because this system is definitely working?” Well here’s a failsafe method. Once you’ve reached your targeted goal, don’t limit your winnings by thinking “I’ll stop when I make another \$100”. Instead think “I’ll stop if I loose the next \$100.” This way you maximize your earnings and minimize your losses. However, if you lose the next \$100 then get up and leave the casino just like you promised yourself.

- Keep a low profile. Don’t bring attention to yourself. The less they know, the better off you are. Because you do want to come back again and again to win more of their money at a later time.

There is however a good point I don’t want to leave out. In some casinos when cashing out at the exchange booth, if your winnings are extremely high, they ask you to fill out a form stating who you are, what you do for a living, and all sorts of other prying questions you don’t want “big brother” to know about. So here’s a solution.

At the casinos that I regularly attend, when you win over \$10,000 you’ll have to fill out this ridiculous form. Different casinos have different limits. However, to avoid all this you could just cash out every 1 to 2 thousand dollars. This way you can stay off of their list altogether.

Chapter 4: Important Rules of Roulette American Vs. European Roulette

If you bought this book, then I’m assuming that you already know the rules of Roulette. However, there are two kinds of roulette tables, the European (figure 1) and the American version (figure 2).

The European wheel and table has only one zero, whereas the American wheel and table has two zeroes. There is a distinct difference in probability between the two. The casino’s house advantage on the American wheel is 5.26%, where at the house advantage on the European wheel is 2.7%. Also you will notice that the numbers on

the European wheel are laid out differently than the numbers on the American wheel. The numbers laid out on the tables are identical except for the single and double zero.

So what does this mean to you? This means that there is a higher chance of winning when playing on the European roulette table. I strongly recommend playing on the European table whenever possible, because there is a lower casino advantage. That is why most European tables have a higher minimum bet, this is to obviously discourage players from taking that advantage.

The roulette tables have a number board that displays all the previous winning numbers. The board will not always be accurate, so what I suggest is that you ask the dealer for a roulette card and pencil so you can keep track of all the winning numbers yourself. Keeping track of the winning numbers is key to this system, as you will see in the upcoming chapters.

The Bets

There are six inside bets and five outside bets.

Inside Bets

The Six Inside Bets

- A. One number – pays 35 to 1
- B. Two numbers – pays 17 to 1
- C. Street bet (3 numbers) – pays 11 to 1
- D. Quad bet (4 numbers) – pays 8 to 1
- E. Five numbers (covers 0, 00, 1, 2 and 3) – pays 6 to 1. Don't make this bet! It is the only one that gives the house an extra 2-1/2 percent advantage.
- F. Line bet (6 numbers) – pays 5 to 1

Outside Bets

The Five Outside Bets

- G. Column bet – pays 2 to 1
- H. Dozen bet – pays 2 to 1
- I. Red/black – pays 1 to 1
- J. Odd/even - pays 1 to 1
- K. High/low - pays 1 to 1

If the minimum total wager is \$5 and you are using \$1 chips, you may place one or more in each of the 5 different “inside” spots or bet all of them on one number, as long as the total adds up to the table minimum. You may cover as many inside numbers as you wish, as long as the total does not exceed the table maximum.

When making outside bets, you cannot divide the table minimum over several fields. The whole amount must be placed as one wager on one decision. You may, of course, place more than one bet and/or bet more than the required minimum, but not more than the table maximum.

Most casinos have multiple roulette tables with varying minimum and maximum table limits. If the table has a \$5 minimum and \$1000 maximum, you can bet up to \$1000 on the inside and up to \$1000 on the outside, for a total of \$2000 on a single spin. This is the case in most casinos I’ve been to. Check with your casino’s roulette rules.

Never bet more than what you can afford to lose and always quit when you have won as much as you set out to win – such as double your bankroll. Start cautiously, until you know exactly how the game works and you feel confident.

Chapter 5: Picking The Right Dealer And Table

Most people overlook the importance of picking the right table and dealer. Here are a few important rules to keep in mind.

Find a roulette table with the least amount of players. Once you have sat down at a table, start a friendly conversation with the dealer. Find out if he/she is the temporary dealer who is just filling in, if so how long has he been at the table and when did he start dealing today? How long has he been a roulette dealer? These points are important factors to your winning strategy. Why you ask?

First, if he is a temporary dealer, you don’t want to waste your money at the table because you need a dealer who keeps a constant spinning style. The entire spinning consistency will change when the regular dealer comes in and this could throw off your entire betting strategy. You sometimes cannot help this because all of a sudden your regular dealer will be relieved. But it is something to look out for.

Second, a dealer who has been spinning for the last four hours has probably caught on to a rhythm and his spins are more likely to be constant.

Third, an inexperienced dealer’s spin rate fluctuates each spin. A seasoned dealer will have a continuous constant spin speed. When you’ve been spinning for 8 hours a day, 5 days a week for the last 3 years, your spins become very constant. This is called a Dealers Signature. That is what you are looking for.

Now also remember that some dealer’s don’t like it when you start winning loads of money on their table because it looks bad on their part in front of their managers. It’s true that they can’t control if a player just happens to be lucky, but dealers are trained to talk and to encourage the players to bet and to give false hope and misleading tips. Trust me, don’t listen to them, they will try to influence your betting style or strategy by giving their two cents. Some dealers are quiet and really don’t care, while others are concerned for the casino’s money.

Let me tell you what happened when I was at the VIP table where the minimum bet allowed was \$25. I was winning a lot of money using my system that night. I was up \$6,000 and I've been playing for about 8 hours straight. The dealer that I was playing with all this time was suddenly relieved, and a new dealer stepped in. I didn't think anything of it at that time, and I just continued to play my system as usual.

This particular dealer was very chatty and friendly and was really striking up a conversation with me. After twenty minutes into the game he started telling me about a strategy that he once tried and how it always worked for him. The system he talked about was pure nonsense, but I was just put into a hypnotic trance and was listening and actually using his technique. There I was, making these foolish bets, making \$2000 bets each spin.

It was the biggest mistake I could have made, getting conned by the dealer. Don't be fooled by chatty dealers, they are working for the best interest of the casino. That dealer wiped out everything I made that night, the whole \$6000. Be careful, don't make the same mistake I did...remember that it's YOUR MONEY.

But aside from that, look for all the other characteristics of an ideal dealer as mentioned previously and you will have great success.

Chapter 6: The Steele System – Basic

Now, everything you've read so far has prepared you to walk into a casino and sit down at a Roulette table. I will now give you step-by-step instructions on how to win a boat load of the casino's money. Here is the system which has been very successful for me and thousands of others. Now let me make it clear, the only reason casino's are still around is because they definitely make money. Don't think your going to wipe out the Casino with this technique. However, this system will generate thousands of dollars on your first visit to the casino as long as you stick to the PLAN.

NO system can ever beat the Casino in the long run, make your money and get out...that's the name of the game.

Now listen carefully as I explain the details of this system. This system has a very simple concept. There is "truth" in any game of probability. This "truth" is what you're counting on. Now suppose a coin was tossed one hundred times, 50 out of the 100 tosses should be heads and 50 should be tails. This is the universal truth, this is the "truth" of probability. With this truth concept there is now way you could lose right? Theoretically, no. Practically, depends on when you quit?

Now this "truth concept" will become your religion, your bible, and you must have faith in your religion and beliefs. The simple-minded tend to deviate and switch faiths, this will only bury you and you will fail.

First let me explain probability.

Probability: (from Marriam-Websters Collegiate Dictionary)

1: the quality or state of being probable

2: something that is probable

3a (1): the ratio of the number of outcomes in an exhaustive set of equally likely outcomes that produce a given event to the total number of outcomes (2): the chance that a given event will occur; b: a branch of mathematics concerned with the study of probabilities

Now back to the roulette table. Suppose you are betting on the 1st dozen. Probability states that you have a 33.33% chance of winning. This is not the case on a roulette table because of the 0 and 00. Your probability is 31.58% which is still not bad. Now suppose that in the last 10 spins, the 1st dozen hits 5 times and the 2nd dozen hits 5 times, probability says that the 3rd dozen should hit. This is what we are counting on. Don't worry if you don't understand it all. It will become clear as you continue to read.

The betting is done on the 1st, 2nd and 3rd dozens only. You must stick to this plan. Here is how the betting works. In this example, I will use a minimum \$5 table with \$1000 maximum. When using this system on a minimum \$5 table, whenever you win a wager, you will be up between \$5 and \$10. When you lose a wager, you increase your next wager and bet on the same dozen you bet previously.

How do you know which dozen to bet? Choose the dozen which hit the least recent. Let me explain. Take a look at the number board or your roulette card to see which two dozens hit the most recent. These two dozens are what you're not betting on. For example, if the last three winning number are 33 (3rd dozen), 27 (3rd dozen) and 16 (2nd dozen), then you start your first \$5 bet on the 1st dozen (as shown in figure 5) because that was the dozen that hit the least recent. Continue to bet on the 1st dozen, increasing your bet each time, until you win. After the win, you start again with \$5 on another dozen.

Figure 5

I have given you examples throughout this book using the American roulette table for your convenience since it is the most common among North American casinos. However, please note that this system can be used on both American and European roulette tables.

Here's another example: If the last five winning numbers are 5 (1st dozen), 11 (1st dozen), 8 (1st dozen), 0, and 15 (2nd dozen) in that order, you can see that the 1st dozen has hit three times and the 2nd dozen has hit once and the 3rd dozen has not hit yet. So you should start your first bet on the 3rd dozen.

Here is the betting chart for the \$5 table (Figure 6). Roulette is one of the few games where you are allowed to take notes and/or refer to any printed material. I recommend that you take this chart into the casino with you so you can refer to it. This chart is also available at the end of this book which you can print out. Print out the \$5 chart at the end of the book now so that you can refer to the chart as you through the following examples.

Figure 6

NO.	BET	DOWN	WINNINGS	UP
1	\$5	\$5	\$10	\$10
2	\$5	\$10	\$10	\$5
3	\$10	\$20	\$20	\$10
4	\$15	\$35	\$30	\$10
5	\$20	\$55	\$40	\$5
6	\$30	\$85	\$60	\$5
7	\$45	\$130	\$90	\$5
8	\$70	\$200	\$140	\$10
9	\$105	\$305	\$210	\$10
10	\$155	\$460	\$310	\$5
11	\$235	\$695	\$470	\$10
12	\$350	\$1045	\$700	\$5
13	\$525	\$1570	\$1050	\$5
14	\$790	\$2360	\$1580	\$10
15	\$1190	\$3550	\$2380	\$20
16	\$1780	\$5330	\$3560	\$10

Let me explain the details of the chart. The “No.” column indicates the number of times you bet on a given dozen. For example, if you look at no. 3, that will be your third bet. The “Bet” column indicates the amount you should bet for each spin. The “Down” column indicates the total amount you would have lost if you loose that spin. The “Winnings” column indicates the amount the dealer will pay you if you win that spin. The “Up” column indicates the amount you will have gained if you win that spin.

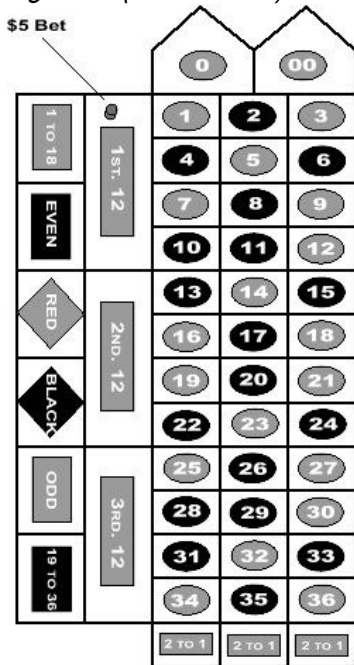

The dollar amounts listed in the charts are in U.S. dollars. If you will be playing at an international casino you can convert the dollar amounts listed in the charts to units. For example, you could use 1000 Japanese yen chips as one unit. Look at the \$5 chart, and replace the \$5 with five 1000 yen chips.

Here’s an example you can follow through. Use the \$5 chart for reference. Lets assume your first bet is on the 1st dozen.

First Bet: According to line 1 of the chart, your first bet is \$5. Place the \$5 on the 1st dozen (a.k.a. 1st 12). If the dealer spins a 9, great you will make \$10 (pays 2 to 1) and you will now start again by choosing another dozen to bet. But assume the dealer spins 23 (2nd dozen), you just lost \$5. So when you loose a spin you must go to the next line of the chart, which is line 2.

Second Bet: The next bet is \$5 (line 2 of the chart) on the 1st dozen again. If you win, you will receive \$10 from the dealer, but remember you will only be up \$5 since you lost the 1st spin (bet of \$5). Now assume the dealer spins a 20. You've just lost, which means you are down a total of \$10 (1st bet + 2nd bet). So since you lost the second spin you must now move on to line 3 of the chart.

Figure 7 (Second Bet)

Third Bet: The next bet you'd place would be \$10 (line 3 on the chart), since you're down \$10. If you win, you will receive \$20 and you will be up \$10 since you lost \$10 in total on bets one and two. If you win a bet, start the next bet on a new dozen starting from line one of the \$5 chart. Assume dealer now spins 28. You just lost and you are now down \$20. Now go to line 4 of the chart.

Figure 8 (Third Bet)

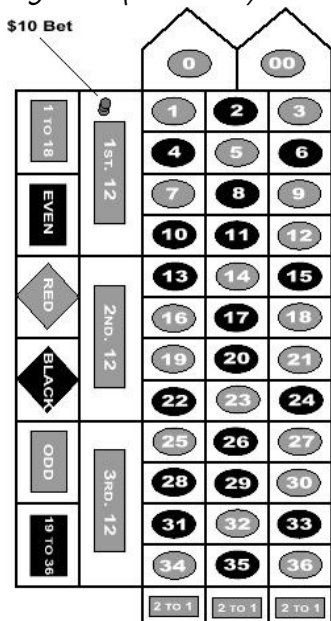

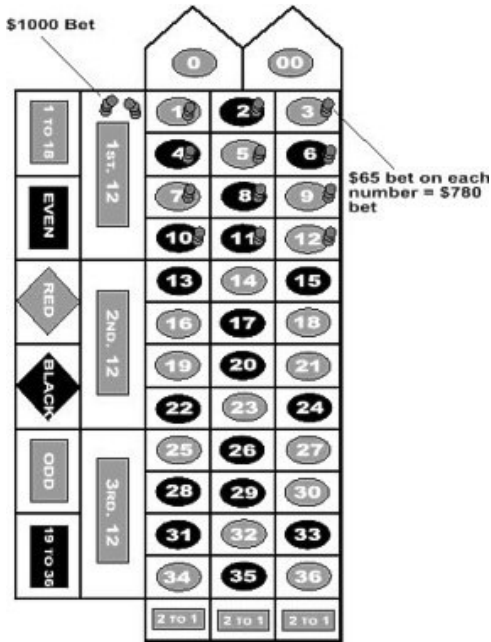

Figure 11

Let's calculate the pay out shown in this example. After you win you will get paid as follows:

\$3000 (on the outside \$1000 original bet + \$2000 payout)
 \$2340 (on the inside \$65 on the winning number + \$65 x 35)
\$5340
 -\$1780 (subtract original bet)
 \$3560 (total winnings)

Don't worry if you don't have that kind of money. You will have made thousands of dollars with this system before long. If you refer to the chart you will see that you are now up by \$10. I am just using an example of 15 misses to show you how to overcome the table limit. You will rarely see it miss 10 consecutive times.

So as I said, **MAKE YOUR MONEY AND GET OUT, DON'T BE TOO GREEDY...**there's always tomorrow. I've also included charts starting with higher minimum bets you can use once you've mastered this strategy. Like me, you can start off with the \$5 chart, then move up to the \$10 chart, and finally the \$50 chart. The \$50 chart is where you want to be. I used to play the \$100 chart, but decided not to recommend that since that just brought in a lot of attention. Hence the \$50 chart is the ideal level that you would like to be at once you start making some serious cash.

Chapter 7: The Steele System – Advanced

This section is for advanced players. I do not recommend that you use the advanced technique until you have mastered the basic strategy. This advanced system is not for everyone but it can increase your winnings dramatically. This is how we made \$10,000 on our first visit to the casino.

The advanced technique involves making some inside bets while also betting on the outside dozens. The inside bets are made starting from the 7th spin.

On average you will win every 4 spins. Occasionally, the ball will miss a particular dozen 6 consecutive times. When this happens, it is even more likely for the ball to land in your betting dozen on the next spin. To take advantage of that, place some bets on the inside of that dozen.

Here's an example: You're playing on a minimum \$5 – maximum \$1000 table.

1. You are betting on the 2nd dozen and it has missed six consecutive spins.
2. On the next spin (7th), make the required outside bet and bet \$5 on five inside numbers (total of \$25 on the inside) on the 2nd dozen as shown in Figure 12. You could bet splits or straight up.

Figure 12

		0	00		
1 TO 18	1st. 12	1	2	3	
EVEN		4	5	6	
RED		7	8	9	
BLACK	2nd. 12	10	11	12	
ODD		13	14	15	
19 TO 36	3rd. 12	16	17	18	
		19	20	21	
		22	23	24	
		25	26	27	
		28	29	30	
		31	32	33	
		34	35	36	
		2 TO 1	2 TO 1	2 TO 1	

3. If you hit the dozen and miss any one of the inside numbers, you will only be down between \$10-\$15. This is ok because when you do hit on the inside, the winnings will more than make up for the losses. Remember that whenever you win your outside bet on the dozen, regardless of whether you won or lost on the inside bet, go back to your regular betting strategy starting from line 1 of the chart with your first bet.
4. If you hit on both the outside dozen and one of the inside numbers, you will be up quite a bit. Now go back to your regular betting strategy from line 1 of the chart on a new dozen, since you've already made a hit on this one.

5. If the ball did not land on the 2nd dozen, you've now lost both outside and inside bets. On the next spin make the required outside bet as usual and increase your inside bet by \$10 on the same dozen. So, your inside bet will now be a total of \$35 and you can cover seven or more numbers as shown in Figure 13.
6. Repeat this strategy until you win a spin.

Figure 13

Keep in mind that there are some risks involved with the advanced technique, but at the same time you have a great chance of winning large amounts of money very quickly. Once of the biggest mistakes that people make when using the advance technique is that they don't have a sufficient bankroll. Take with you at least 30% more than the minimum bankroll when using the advance technique. You will have to be rational and not go overboard when betting inside. You will have to use your judgment when making this kind of bet.

Only use the advance technique is the dozen has not his six consecutive times. Starting inside bets on earlier spins can quite easily drain your bankroll. This happens because the amount of money you bet increases quickly and the betting chart does not make up for any losses made on the inside bets. For your convenience I have added a \$5 chart for this advanced technique. See Figure 14.

NO.	BET	DOWN	WINNINGS	UP	ADV
1	\$5	\$5	\$10	\$10	
2	\$5	\$10	\$10	\$5	
3	\$10	\$20	\$20	\$10	
4	\$15	\$35	\$30	\$10	
5	\$20	\$55	\$40	\$5	
6	\$30	\$85	\$60	\$5	
7	\$45	\$130	\$90	\$5	\$25
8	\$70	\$200	\$140	\$10	\$35
9	\$105	\$305	\$210	\$10	\$45
10	\$155	\$460	\$310	\$5	\$55
11	\$235	\$695	\$470	\$10	\$65
12	\$350	\$1045	\$700	\$5	\$75
13	\$525	\$1570	\$1050	\$5	\$85
14	\$790	\$2360	\$1580	\$10	\$95
15	\$1190	\$3550	\$2380	\$20	\$105
16	\$1780	\$5330	\$3560	\$10	\$115

Figure 14

Chapter 8 – Don't Loose Your Head At The Casino

This betting strategy, on its own, will definitely make you a winner, but this book in its entirety will KEEP you a winner. It is very important that you understand the two differences. The betting strategy is just as important as picking the right roulette table, choosing the right dealer, following the gambling do's and don'ts, etc. These crucial elements make this system unbeatable. Without one, the entire system will collapse and so will your bankroll. Don't take this lightly. Remember to follow the advice and rules I give you. Stick to every letter . . . I'm completely serious. Do that and you'll be making a bundle at the casino.

Let me tell you about a client of mine. We'll call him Bob, since he's kicking himself right about now. Bob had read my book, and he thought the system was absolutely amazing when it started working for him. Bob had the betting strategy down pact, but failed to pay attention to the other rules. This was his mistake, and it cost him \$2,000. Bob just didn't know when to quit. He just kept going and going, thinking "I'll stop when I make another \$1000." Eventually the casino antics go to him and he just lost it. He started bending the rules a little and started to make his own "gut feeling" decisions. That is the common mistake that my clients make when they're so enthralled with the winning part and they forget it's the strict rules of the system that got them there in the first place. Bob has now learned that no matter what, stick to the system and leave when you're ahead.

I'm emphasizing rule 5 from Chapter 3 which states:

When do you stop? Well, before you step into the casino set a fixed amount that you want to walk out of the casino with. Make sure it's reasonable, like doubling your bankroll. Once you've reached your goal, you may be asking yourself "Should I stop or should I keep playing because this system is definitely working?" Well here's a failsafe method. Once you've reached your targeted goal, don't limit your winnings by thinking "I'll stop when I make another \$100". Instead think "I'll stop if I loose the next \$100." This way you maximize your earnings and minimize your losses. However, if you lose the next \$100 then get up and leave the casino just like you promised yourself.

Let this book remind you, that it's better to leave a winner than to leave the casino having lost all your money. This book will not only ensure that you are going to win on your next trip to Las Vegas or Atlantic City but will ensure that you stay a winner throughout your gambling experiences. And that, my friend, is the key.

Remember, I myself have done what Bob has done. I have made some drastic mistakes as well when I first started out to become a professional gambler. Stick to my advice and you have to learn the hard way. The reason why I'm stressing this point so much is that no matter what I say there are still some people out there who are going to read my book, work the betting strategy and not follow the entire system. And when they lose whatever money they were up, they blame the system . . . they say it doesn't work. So I decided to include this chapter to make sure my readers understand that just using my betting strategy will win you a lot of cash, but using my system will allow you to keep that cash. Believe me . . . I know!

Chapter 9: Quiz Time

Now that I have taught you everything you need to know about this winning system, I would like to quiz you on how well you understood the information presented to you. This is a fairly simple quiz just to get yourself confident and more comfortable with the system and how it works.

Questions

1. The last winning numbers are 34, 25, 5 and 11 in that order. Which dozen should you bet on when making the first bet?
2. You are on your 4th bet playing on the minimum \$5 table. What amount should you bet?
3. The dealer informs you that he is just a relief dealer and he had just started his shift. What do you do next?
4. You walk into the casino with \$500. How much do you buy in for when sitting down at the roulette table?
5. If you somehow loose your bankroll carelessly, how much do you pull out of your bank account?
6. The dealer gives you an inside tip, and starts to recommend his own strategies. What will you do?
7. The last winning numbers are 0, 00, 17, 20, 24, 13, 7 and 11 in that order. Which dozen should you bet on if this was your first bet?
8. This is your first time using this system in the casino, and you are up \$5000. You decide to make some inside bets to increase your winning, how much should you bet on the inside?
9. The number board at the roulette table is not accurately displaying the winning numbers. What do you do?
10. You have mastered the basic betting strategy and have become very comfortable with it. You are on your 7th bet using the \$5 betting chart. How much should you bet?

Here are the answers. Check your results and see how ready you are!

Answers

1. You must bet on the 2nd dozen, since that is the dozen that hit the least recent. (Refer to examples in Chapter 6)
2. You should bet \$15. (Refer to Figure 6 betting chart at the end of the book)
3. Move on to another table. You are looking for the regular dealer who has already put in a few hours on his shift. (Refer to Chapter 5)
4. You must only buy in for \$125 because you should only buy in for $\frac{1}{4}$ of your bankroll. (Refer to Chapter 3, Rule 3)
5. You pull out \$0. If you have lost your entire bankroll then you should get up and leave the casino. Re-read this book and its guidelines and come back another day better prepared. (Refer to Chapter 3, Rule 4)
6. Ignore his tips completely. Do not let him side track you from your winning system. Remember it's your money, not his. (Refer to Chapter 5)
7. You must bet on the 3rd dozen, since that was the dozen that hit the least recent.
8. You bet \$0 on the inside section. If it is your first time using this system at the casino, DO NOT BET ON THE INSIDE. You are not experienced enough to use the advanced betting method. (Refer to Chapter 7 and you will see why)
9. Ask the dealer for a roulette card and pencil (or carry your own). Keep track of the winning numbers yourself so that you know where your next bet should be and how much you need to bet. (Refer to Chapter 4)

10. Since you are already an experienced player with this system, on the 7th bet you should bet the regular \$45 on the outside dozen and also a \$5 bet on five numbers on the inside dozen, for a total inside bet amount of \$25. (Refer to Figure 14 in Chapter 7)

I hope you did well. You are now on your way to winning thousands of dollars. If not, please refer back to the sections of the book to better understand the system.

Chapter 10: Final Thoughts

Let's face it, nothing is better than seeing exactly how something works. Nothing beats being able to try out the system right away. Nothing comes close to being at a live event where the energy level and excitement is so high that the air crackles with electricity.

Are you excited? I hope so. We have come to the end of my book. The techniques and strategies outlined are used by me and many others I have taught. They work when used wisely and cautiously. Please always play safe and stick to the rules outlined. The rules are important to keep you in line. It also prevents you from making irrational decisions.

Good luck and best wishes to you.
John C. Steele

Additional PERSONAL Note: This is a great winning system if you have the bankroll to play to the 9th and 11th bets LIVE. Not recommended for play online as online casinos have the "habit" of skipping a dozen for up to 15-20 spins!

SPECIAL REPORT

The Top 5 Casinos Which Prove To Be The Best Money Earning Spots in Las Vegas”

Now, we all know that choosing the right casino to gamble at is very important if winning is your strategy. Casinos make all the difference. I have decided to pick Las Vegas, because quite frankly, there is no other place in the world that gives you the excitement and thrill that every gambler seeks. I have personally picked the Top 5 Casinos that I believe are the best gaming spots to win thousands of dollars. I would like to make clear I am in no way affiliated with any of the casinos that are recommended in this report. . .so there is no bias in my decisions to pick the following casinos.

Bellagio
Golden Nugget
Hard Rock Hotel and Casino
Mirage
Venetian
